

Beach Vitex

Vitex rotundifolia

VY-teks roh-tun-dih-FOH-lee-uh

Height: 0.5 metre

Spread: 2 to 3 metres

Full sun

Drought tolerant
once established

Prefers a well-
drained soil

Insect attracting

Beach Vitex is a hardy groundcover with small clusters of tiny bluish-purple flowers throughout the year.

The grey-green to silvery-green roundish leaves have a spicy fragrance when crushed. This hardy plant is commonly found on beachfronts and makes for an impressive garden plant. Pruning can keep this plant compact and very low.
