

Kidney Weed

Dichondra repens
di-KON-druh REE-penz

Height: 10 to 30 centimetres

Spread: 1 to 5 metres

Lawn alternative

Full sun with
adequate water

Full shade

Drought tolerant
but prefers
adequate moisture

Well drained soil

A creeping plant that spreads widely from underground stolons, making it a good ground cover. The soft, low foliage makes for a great no mow lawn alternative in low traffic areas.

It grows best in moist, lightly shaded areas but will grow in sunny spots provided it gets some water in dry times. It looks great cascading from a hanging basket and performs well indoors in a bright position.
