

Mangrove Boobialla

Myoporum acuminatum
Myo-POOR-um a-Q-min-AH-tum

Category: Shrub (Under 5m)

Height: up to 3 metres

Spread: 5 metres

Part shade

Drought tolerant
once established

Well-drained soil

Bird attracting

Butterfly
attracting

A fast-growing dense shrub with white and purple flowers that appear mainly in Summer, however, can spot flower throughout the year, attracting pollenating insects and small birds. The fruit that follows attracts the larger fruit-eating parrots.

The leaves are medium to large and are somewhat fleshy like many *Myoporum* species. They are a luscious bright green and make an excellent privacy screen and can be pruned to shape.

HOT TIP: These very fast-growing plants are used to form hedges, windbreaks, bushes, and as isolated specimens. They are ideal for coastal gardens.
